

## Socket Set Screw

**Product #** SSP102414MR

**Screw Size** 10

**Thread Count (Pitch/TPI)** 24

**Thread Type** Coarse

**Length** 1/4 in

### DESCRIPTION

The set screw is used most often to assemble and secure two items. The screw goes through a threaded opening in the outside item to impede movement between the two items. This type of screw is used to prevent movement between two rotating parts, such as between a pulley and its shaft.
